

Building Blocks to Raise the Separation of Natural Sciences and Humanities

By Helga Haase

Hardback. Book Condition: New. Not Signed; The present work contains a proposal for a foundation of elementary, fundamental terms within philosophy and science, to be built from modal operators. With their help, it will be possible to shed new light on numerous basic problems of modal logic, of the theory of probability, of mathematics, of quantum physics, and of the theory of time. The author, in her decades-long, self-taught course of study, has attempted to take up the weaknesses in expositions related to the basic themes named above, expositions with Aristotle, Frege, Russell, Heisenberg and many others. Furthermore, the author has sought to rectify these weaknesses using her sketch of a constitutional system. With that, the following points are worth noting: - Inconsistencies have been discovered in the definitions (which inform all significant logicians) in the Aristotelian tables of implications regarding modal terms (8); - The system endeavours, with the aid of the modal theoretical definition of unit, to bolster Frege's critique of the current definition of unit (10); - Using the modal theoretical definitions of the point, the thesis makes it possible to eliminate the obvious contradictions in the constructions of the continuum (15) and the theory of time (16);...

Reviews

Very beneficial to all of class of people. I am quite late in start reading this one, but better then never. You may like just how the writer create this publication.

-- **Audra Klocko PhD**

Thorough information! Its this type of great go through. It is amongst the most incredible publication i actually have read through. It is extremely difficult to leave it before concluding, once you begin to read the book.
