The nature of this effect affords one way of learning something of the character of these solutions, for it is as surely a record of their work as is the ore itself. In this branch of investigation, however, it is necessary, just as in the study of the ores, to guard against crediting a certain result to a single process when in reality it may record the superposition of a later process, such as downward enrichment, upon another and earlier deposition. ALTERATION OF MONZONITE PORPHYRY OF THE WELLINGTON MINE. SELECTION OF MATERIAL. In the Wellington mine, near the east end of the Oro level, there was in 1909 a good opportunity of studying the alteration of the country rock near the east vein, which is reached from the hanging-wall side by a crosscut from the fresh diorite porphyry (Br. 217) described with a...
